Web Technologies : HTML5, CSS3, Responsive Web Design
Frameworks & Libraries : React.js, React Hooks, Bootstrap, Material UI, Tailwind CSS
Tools & Platforms : Git, GitHub, Vercel,Vite
APIs & Integration : REST APIs, JSON data handling.

Projects

AI-Powered Job Application Tracker [Link Demo | GitHub]

Javascript, React.js, Material UI , Gemini API, Vercel

- Built a job application tracker in React.js and Material UI that centralizes applications, hiring stages, and follow-ups in a single dashboard.
- Integrated the Gemini API to turn a resume into an actionable 5-part report: match score, matched skills, missing skills, strengths, and improvement suggestions.
- Built an AI interview-question generator that tailors questions to the selected role, difficulty level, and focus area.
- Implemented drag-and-drop status updates with @dnd-kit across 5 hiring stages (Wishlist, Applied, Interview, Offer, Rejected), replacing manual edits with a single gesture.
- Deployed on Vercel with a responsive layout; scored 81 (Performance), 97 (Accessibility), 100 (Best Practices), and 90 (SEO) on mobile Lighthouse.

Expense and Saving Tracker [Link Demo | GitHub]

Javascript, React.js, Bootstrap , Recharts

- Designed a personal finance dashboard in React.js and Bootstrap that brings transactions, savings goals, and spending analytics into one responsive interface.
- Implemented complete transaction management with 6 operations (add, edit, delete, search, filter, sort) so users can find and control any entry quickly.
- Built a savings insights module tracking 4 metrics (monthly savings, growth, average savings, completed goals) and visualized trends with interactive Recharts charts.
- Developed a goal-tracking system that calculates progress automatically and keeps a history of completed goals.
- In self-testing, logging 10 expenses in the app was about 26% faster than using a spreadsheet.
- Tested with 1,000+ sample transactions to confirm core features (add, edit, delete, search, filter, sort) work at scale.
- Deployed live on Vercel with a fully responsive Bootstrap UI across mobile and desktop.

Achievements/Certifications

Code League 1.0 — Intercollegiate Coding Competition, GHRCEM Nagpur (*8-hr Hackathon, Feb 2026*)
Built the UI and core JavaScript functionality for an Appointment Booking app, in a team, using HTML, CSS, and JavaScript

Won 2nd Prize (*Oct 2024*) — Technical Presentation Competition, Dr. S.C.Gulhane Prerna College of Commerce, Science & Art Presented on the .NET framework as part of a team.
